Product Description

Windows Server 2019 Standard 16 Core OEM English Version Brand New

Product description:

Windows Server 2019 includes a number of new features to its core foundation, including identity management and enhanced security capabilities to ensure data and access to data maintains its integrity from end to end, regardless of whether it's stored locally or in the cloud.

New features such as Hyper-V, Nano Server, Shielded Virtual Machines, secure Active Directory environments and help them migrate to cloud-only deployments and hybrid deployments

The Management and Automation area focuses on tool and reference information for IT pros who want to run and manage Windows Server 2019, including Windows PowerShell.

Credential Guard uses virtualization-based security to isolate secrets so that only privileged system software can access them

Windows Server 2019 Minimum Hardware Requirements

Processor	1.4Ghz 64-bit processor
RAM	512 MB
Disk Space	32 GB
Network	Gigabit(10/100/1000baseT)Ethernet adapter,1Gbps connection is deal
Optical Storage	DVD drive(if installing the OS from DVD media)

Windows Server 2019 includes several important changes to the core operating system and many new features in an effort to double down on the security, as well as the data being used by endpoints. New and upgraded features include the following.

Nano Server: Similar to Windows Server Core mode, a Nano Server must be remotely administered, as it provides no local logon capability and only supports 64-bit applications. Nano Server is optimized for use in private clouds and data centers.

Windows containers: Unlike virtual machines, containers allow for operating system-level virtualization by providing just enough access to the OS, libraries, and underlying resources to host applications in an isolated user-space.

Active Directory Domain Services: Privileged Access Management (PAM) helps to address the theft of credentials by working with Identity Manager (MIM) to protect the Active Directory (AD) forest from accounts with privileged access.

Active Directory Federation Services (ADFS) continues to provide simple, secure identity federation and Single Sign-On (SSO) between ADFS-secured enterprises and partner organizations.

Networking features:

DHCP: As Network Access Protection was deprecated in Windows Server 2012 R2, in Windows Server 2016 the DHCP role no longer supports NAP

DNS:

DNS client: Service binding – enhanced support for computers with more than one network interface

DNS Server: DNS policies, new DDS record types (TLSA, SPF, and unknown records), new PowerShell cmdlets and parameters

Windows Server Gateway now supports Generic Routing Encapsulation (GRE) tunnels

IP address management (IPAM): Support for /31, /32, and /128 subnets; discovery of file-based, domain-joined DNS servers; new DNS functions; better integration of DNS, DHCP, and IP Address (DDI)

Management

Network Controller: A new server role to configure, manage, monitor, and troubleshoot virtual and physical network devices and services in the datacenter

Hyper-V Network virtualization: Programmable Hyper-V switch (a new building block of Microsoft's software-defined networking solution); VXLAN encapsulation support; Microsoft Software Load Balancer interoperability; better IEEE Ethernet standard compliance.
